**FLORIDA
COLUMNS**
Spaulding Craft Inc.

*Our highly skilled craftsmen and artists can offer the details and quality
you seek in a material that will last!*

- Upscale Residential & Image Related Commercial Displays
- 20 Years of Experience, Founded 1976

- Classical & Contemporary Column Covers • Balustrade, Cornice & Trim • Architectural Domes & Spheres
- Fountains • Architectural Carvings • Storefronts

MR / MANUFACTURER

FLORIDA COLUMNS

Spaulding Craft, Inc.

Florida Columns is your innovative and reliable source for custom and stock columns, column covers, cornice and domes. We have gained a reputation for excellence in design, engineering and product quality. Spaulding Craft Inc. (SCI), manufacturer of Florida Columns, has supplied architectural components to some of the most prestigious building projects in recent years, both commercial and residential. While most of our competition still uses wood and precast concrete, SCI works exclusively with composites (commonly known as FRP). A revolution in the use of composites is currently underway in the aviation and auto industries. SCI has been, and continues to be, a driving force in the use of composites for the building industry. SCI is

a full service company, with all phases of production completed in-house, including: shop drawings with C.A.D. (computer assisted design), patterns, tooling, steel fabrication, production and shipping. Installation assistance is also available. For more information on the design and use of architectural composites, please call or write for a comprehensive guidelines manual.

Lightweight. Pound for pound, FRP is stronger than concrete, steel and aluminum. This translates to great savings in structural design.

Durability. Exposed FRP structures have proven the material can weather extremes for more than 30 years. FRP architectural parts greatly reduce maintenance costs. A variety of

fire retardant materials are available for interior use or stringent building code requirements.

Flexible Design. Any shape imaginable can be built with FRP: ornate highly detailed carvings, spheres, domes, curved shapes, columns, balusters, the list is endless! Nearly any surface finish and texture can be achieved. SCI offers: high gloss, flat or matt finish, granite, even a sandblasted limestone finish. A pre-selected color can be an integral part of the molding process, eliminating the need for field painting. Some cultured marble finishes are available, and for applications where field painting is necessary (column-cover seams) components can be shipped in a white sandable gelcoat. It sands like body primer and takes paint beautifully.

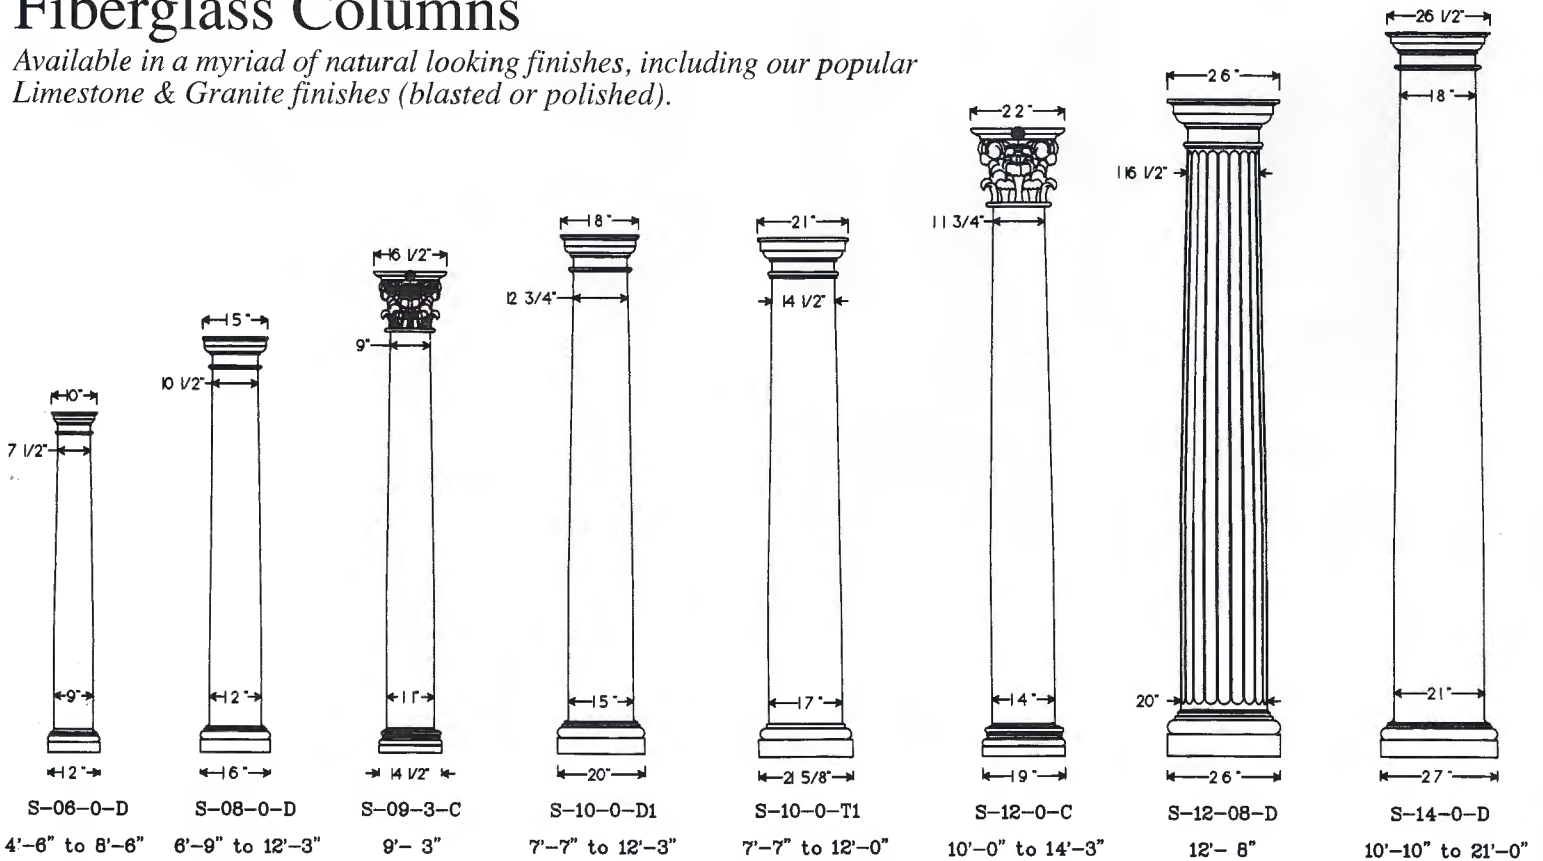

Expert pattern making

C.A.D. Shop Drawings

Fiberglass Columns

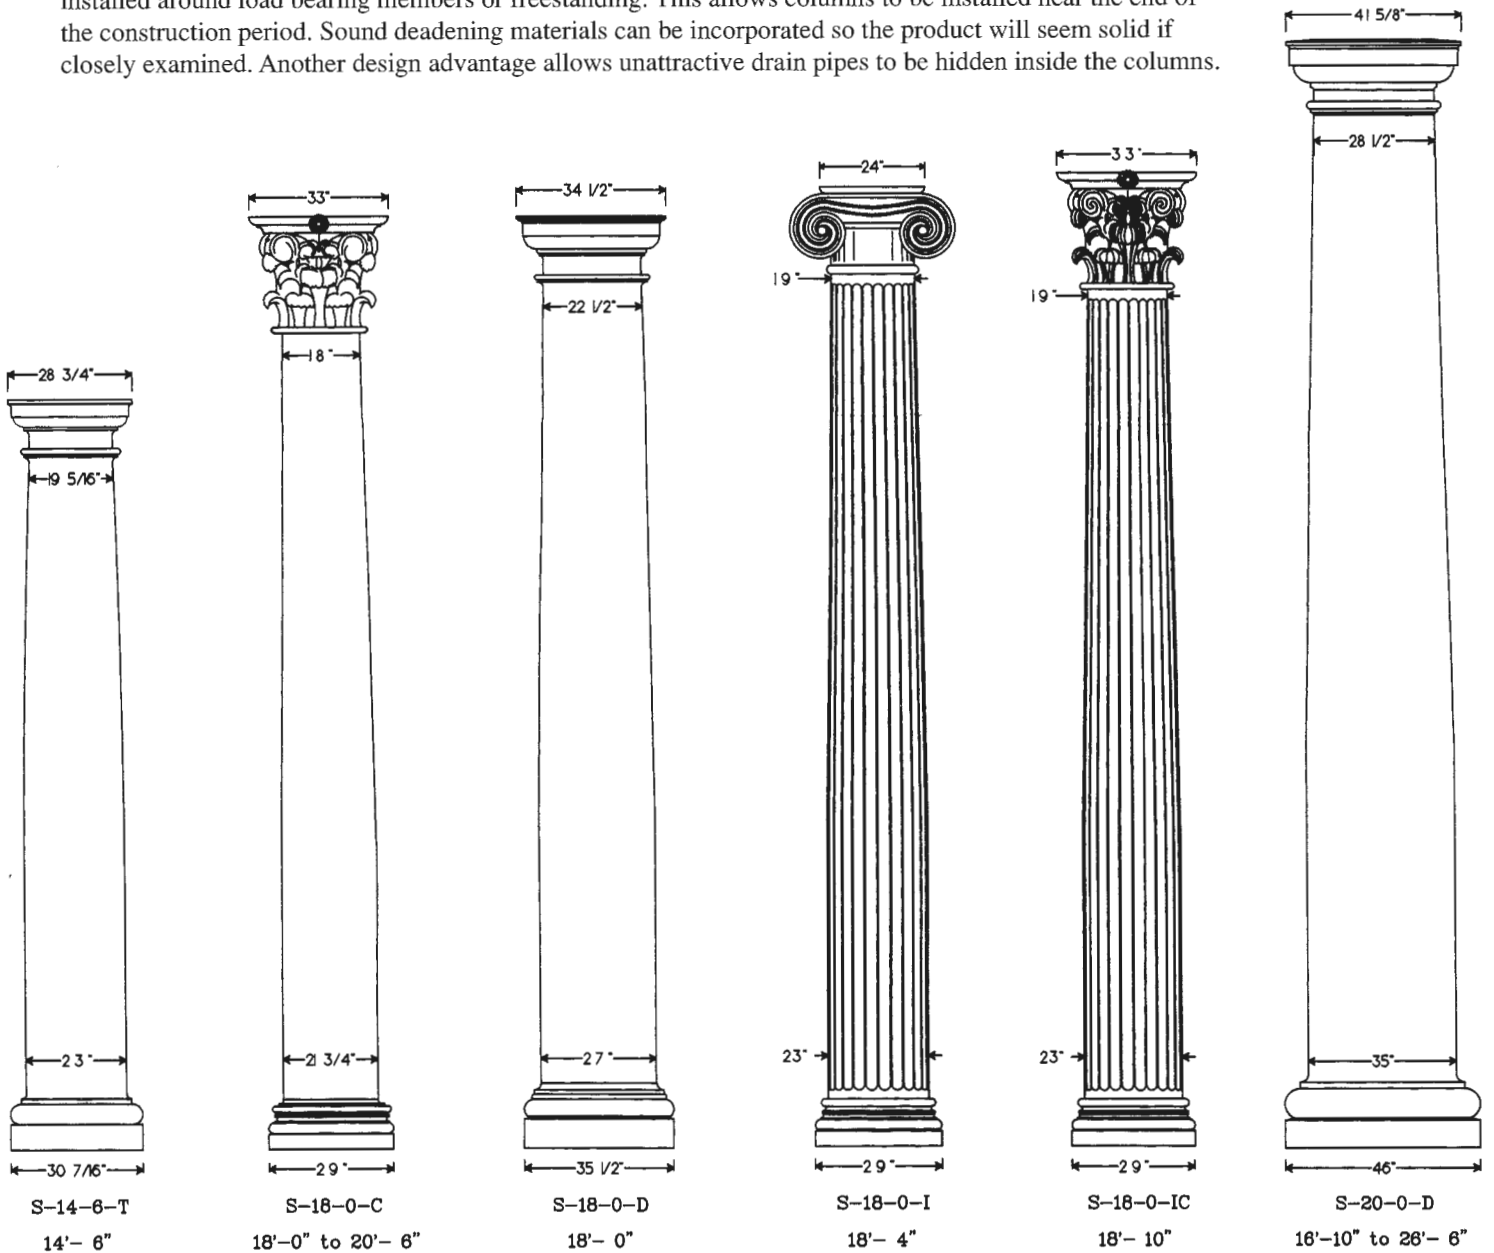

Available in a myriad of natural looking finishes, including our popular Limestone & Granite finishes (blasted or polished).

Exterior Facade & Columns, Market Square, Washington D.C. 1989

Over the years SCI has produced thousands of architectural columns varying from simplistic contemporary to highly detailed classical styles. During your planning stages please inquire about our standard column covers. A stock Florida Column is competitive in price, while maintaining the clear advantages of FRP. Columns are generally designed to be non-structural, shipped in vertical halves, and installed around load bearing members or freestanding. This allows columns to be installed near the end of the construction period. Sound deadening materials can be incorporated so the product will seem solid if closely examined. Another design advantage allows unattractive drain pipes to be hidden inside the columns.
